

# Trusted Expertise for Your Entire Cloud Journey

UNISYS CLOUD AND INFRASTRUCTURE SOLUTIONS

# Cloud Transformation is a Journey, Not Just A Goal

## Think of Unisys As Your Guide

Organizations are increasingly deploying technology in the cloud. But many still find themselves wondering how to migrate existing applications with the minimum impact on core business operations and cost.

With Unisys Cloud and Infrastructure solutions, our team of experts can assist you through each phase of your cloud journey (see figure). We will assess your existing landscape, collaborate to identify the best cloud strategy for your organization and its goals, migrate and manage your environment, and help you extract the greatest long-term value from your investment.

*With Unisys,  
you'll experience  
cloud-enabled value and agility  
while being secure and compliant  
throughout your cloud journey.*

## Cloud Consulting

### Align Your Cloud Strategy with Business Outcomes

The cloud delivers agility, scalability, and innovation. But to enjoy these benefits and remain secure and compliant, you can't just carry over your legacy practices. Instead, you have to modernize your infrastructure and the applications that run on it while automating and embedding security and compliance in all phases of your transformation.

Choosing a proven partner that can provide is all – expertise, security, compliance, and automation — and the guidance and support you need throughout your cloud journey — is essential to realize the full value the cloud represents. When working with Unisys, our consultants will thoroughly assess your organization's operational systems, capture where you want to go, and build a roadmap to align your cloud strategy with tangible business outcomes.

*Unisys offers the depth of knowledge you need to realize the full benefits of digital transformation.*

## Cloud Implementation

### Make Your Cloud Vision a Reality

True digital transformation starts with the end goal in mind – not just moving workloads or data to the cloud but building better business capability and agility. That means addressing the technical implications, but also the operational and organizational change implications as well.

By working with Unisys, you gain access to a team of business and technical experts with the skills, experience, and insight to mitigate operational, security, and compliance risks across platforms, processes, people, and data. You'll benefit from our experience with large-scale, rapid, and secure migrations and application modernization projects.

Unisys delivers solutions that are intuitive to manage, highly automated, resource-efficient, and seamless with your business operations. Simplify and automate workload migrations, ensure highly automated configuration remediation for security compliance, and deploy flexible and effective compensating security control, all while saving substantial time and optimizing your IT spend.

Work with Unisys to establish a secure cloud platform that adapts as you grow and change.

## Cloud Management

### Streamline Ongoing Cloud Management

As technology moves to the cloud, IT ecosystems evolve. Therefore, maintaining control in hybrid and multi-cloud environments requires a robust governance framework. Without it, sprawling workloads, rogue applications, and unintended security and compliance risks can quickly take hold.

With Unisys, you can recoup management costs by automating manual processes and optimizing management with expert guidance. With improved control of your time and money, you can better link your IT organization to your lines of business for greater innovation and performance. Enable seamless, secure integration with other systems. Reduce service demands and improve efficiency by bringing all policies and procedures under one fully automated, governed umbrella, cutting costs, and eliminating complexity in the process. Through Unisys managed services, you can outsource governance and focus on other tasks. Continuously assess, monitor, and remediate risk to meet the gold standards in security and compliance.

*Ensure your operations run smoothly and securely while simplifying complexity and bringing visibility and governance to your solution landscape.*

## Cloud Evolution

### Achieve Exponential Gains

Migrating applications and workloads to the cloud is not the end goal. It needs to be part of an ongoing evolution to help you adapt to change. That means continually identifying ways to use technology to enhance innovation and regularly reviewing and fine-tuning your environment to ensure it operates at peak efficiency.

With the Unisys Cloud Optimization framework, you can analyze systems, processes, and apps to optimize resource management and eliminate waste. You'll gain visibility into your cloud spend and receive reports with recommendations to continually improve outcomes. Automation and governance around provisioning will enable better control over spending and consumption, while AI and ML enable continuous compliance and security monitoring to save time and reduce risk.

*Regular cloud check-ups not only help you contain costs, improve performance, and maintain security and compliance, it provides you with multiple pathways to evolve and maintain your competitive edge.*

When you partner with Unisys, you'll build innovation into your cloud DNA.

### Why Unisys Cloud and Infrastructure Solutions?

Unisys' global cloud experience spans 110 countries, dozens of vertical industries, and over 250 clients. With more than 1,300 AWS, Azure, and Google-certified experts that follow the latest industry best practices, Unisys has the global resources and relationships to help you navigate the cloud journey for even the most complex hybrid and multi-cloud environments.

Each engagement is custom-tailored to our client's needs and goals and is based on deep industry expertise in every sector we support. We take a consultative approach to solution design, apply industry-recognized Unisys ingenuity, and leverage an extensive partner network to deliver cloud solutions, securely and at scale, for the world's most digitally demanding and highly regulated agencies and enterprises.
